

## Making Your Hub Campagnolo 11-Speed Compatible

---

American Classic Rear RD205: 17mm Axle (Current Style).

To make your hub Campagnolo 11-Speed compatible:

1. Identify your hub. Please view document: Identifying Your Rear Road Hub.

**Victory and 15mm RD205 are NOT Campagnolo 11-Speed compatible. You must have a 17mm RD205 hub.**

2. If you have identified your hub as a 17mm RD205 continue with document: 17mm RD205 Cassette Hub - Overhaul / Bearing Change. **Note:** axle assembly in Step 11.

Note: If you are switching from Shimano to Campagnolo also pay attention to the axle re-assembly as it will be different. The wheel is required to be redished for optimal strength.

11-Speed cassette applications require an external 0.5mm cassette body spacer. This spacer prevents the cassette from dragging on the hubshell.
