

Seatpost Installation

New Style Seatpost Installation - Designed to work with industry standard 7mm round saddle rails.

Tools Needed:

Torque Wrench with 4mm hex key

First:

Install the saddle to the seatpost

Second:

Install the seatpost in the bike

Third:

Micro adjust as needed.

Step 1:

With the saddle resting top side down on a table, position the cradle plate as shown on the rails of the saddle.

Step 2:

Position the two lower clamps as shown. The clamps will rest on the cradle plate and the rails of the saddle.

Step 3:

Press the top of the seatpost down into position while sliding the 2 lower clamp pieces into place.

Step 4:

While holding the lower clamp pieces in place, install the 4mm hex bolt (lightly greased). Do not tighten completely.

Step 5:

Install the seatpost in the bike and then micro adjust accordingly.

Torque Spec - 35 inch-pounds or 4 N-M

All repairs should be performed by a Professional Bicycle Mechanic.
